SAIKUMAR NUKALA

ETL / DATA QUALITY TEST ENGINEER

ETL/DWH Testing | Data Validation | SQL | Data Migration Testing | BI Testing | Python Automation

+91-7780392191 | saikumar.nukala.qa@gmail.com | linkedin.com/in/saikumarnukala

Remote from India | Primary hours: IST | UK/EU mornings and US East evenings on request | Full-time or contract

SUMMARY

ETL / Data Quality Test Engineer with 5+ years of experience across capital-markets surveillance, banking data projects, and cloud migration validation, including client work for Nomura in the UK, ANZ Bank in New Zealand, and Transamerica in the US. Validated 500+ data-quality rule checks using in-house DQE and Informatica DQ and investigated failed validations to root cause across ETL/DWH and data-quality testing. Hands-on with SQL source-to-target validation, reconciliation, migration testing, Python validation automation, BI testing, API testing, and Jenkins.

SKILLS

ETL / DWH Testing: ETL/ELT Testing, Data Warehouse Testing, Source-to-Target Validation, Data Mapping, Transformation Validation, Data Reconciliation, Data Conversion Testing, Data Migration Testing, Schema / DDL Validation, Record-Count Validation
Data Quality Testing: Data Quality Rule Validation, Mandatory-Column Validation, Multi-Column Deduplication, Completeness, Uniqueness, Referential Integrity, Data Accuracy and Integrity, Rule-Failure Investigation, Root-Cause Analysis
SQL & Databases: Advanced SQL, Data Matching, Discrepancy Analysis; SQL Server, Oracle, Amazon Redshift, Teradata
DQ Tools: In-house DQE, Informatica DQ
BI Testing: Power BI, TIBCO Spotfire, Report and Dashboard Validation, Database-to-Report Reconciliation, Data Accuracy and Visualization Validation
Automation: Python for QA and Data-Validation Automation, Cucumber, Selenium WebDriver
API Testing: Postman, REST API Testing, Backend Data-Integration Validation
Cloud: AWS S3, Cloud Migration Validation
Test Management / CI/CD: JIRA, HP ALM, Micro Focus ALM, QTest Manager, Zephyr, Jenkins, Git, Bitbucket
AI-Assisted Productivity: GitHub Copilot, Claude Code CLI
Additional Data Platforms: Snowflake, PostgreSQL, Athena

EXPERIENCE

QUALITY ANALYST

Matrix USA, Bangalore | Client: Nomura (UK) - Market Abuse Surveillance | Oct 2024 - Present

- Validated ETL/DWH and cloud data across SIT and Production for the SMARTS market-abuse surveillance platform covering Fixed Income (FI) and Foreign Exchange (FX).
- Validated data-quality rules using the in-house DQE and investigated failed validations to root cause.
- Reconciled source and target datasets using SQL-based structure, duplicate, null, record-count, DDL, and column-level mapping checks across 50+ tables per release.
- Automated repetitive ETL and data-validation checks with a Python-based testing framework.
- Validated backend microservices and data integrations through API testing with Postman and REST.
- Authored and executed 700+ automated test cases using Cucumber, with execution integrated through Jenkins CI/CD pipelines.
- Prepared lower-environment test data and mock datasets for validation and defect investigation.

CONSULTANT - ETL TEST ENGINEER

HCL Technologies, Bangalore | Client: ANZ Bank (New Zealand) - RBNZ, MUREX, TRADE 360 | May 2023 - Oct 2024

- Performed ETL/DWH testing across 8 sub-projects, validating 200+ ETL mappings for banking data flows.
- Validated data-quality rules in Informatica DQ and investigated failed validations to root cause.
- Reconciled source and target data using SQL and ETL validation checks for structure, duplicate, null, DDL, and record-count conditions across Dev and Production.
- Validated end-to-end data flow between banking applications and data warehouses through API testing.
- Authored and executed 550+ automated test scripts using the proprietary test-automation framework (TAF-IntelliJ), with execution managed through Bitbucket and Jenkins.
- Designed positive, negative, and edge-case scenarios aligned with application and data-logic changes.
- Tracked and reported 100+ defects through the complete defect lifecycle and collaborated with development and business teams on resolution.

SOFTWARE TEST ENGINEER (TEST ANALYST)

Apexon, Bangalore | Client: IQVIA - CDAS Clinical Analytics & DTMS Analytical Navigator | Jun 2022 - May 2023

- Validated BI/DWH/ETL/UI data flows across two concurrent clinical-analytics projects, covering 100+ reports and dashboards.
- Reconciled Power BI and TIBCO Spotfire outputs against database sources across 30+ report components, verifying report data accuracy and visualization consistency.
- Reconciled source-to-target datasets across 80+ tables using SQL and Beyond Compare.
- Authored 500+ test cases and maintained automation scripts using the proprietary test-automation framework (PAF / Pace Automation Framework).
- Automated targeted UI regression scenarios using Selenium WebDriver and Cucumber.
- Documented test execution evidence in Micro Focus ALM and analyzed defects in JIRA to maintain traceability through the defect lifecycle.

SOFTWARE TEST ENGINEER (TEST ANALYST)

Apexon, Bangalore | Client: Transamerica (via Deloitte) - LTCG Data Lake | Jul 2021 - Jun 2022

- Owned end-to-end ETL testing as the sole QA resource for a Long-Term Care Group Data Lake migration project.
- Validated data-quality rules using the in-house DQE during the Data Lake migration and investigated failed validations against source and target data.
- Validated cloud data integrity during migration from on-premises systems to AWS across 60+ tables, including source-to-target column mapping checks.
- Automated data matching and validation with Python scripts for repeatable source-to-target comparison.
- Authored 350+ test cases covering migration and source-to-target validation scenarios.
- Developed complex SQL comparisons between source and target datasets and identified 50+ data discrepancies during migration.
- Documented root causes and tracked defects in JIRA to provide traceability through resolution.

SELECTED DATA QUALITY & AUTOMATION

- Data Validator (Python): Developed a validation tool for end-to-end ETL checks covering data, duplicate, null, count, and DDL conditions across CSV, Excel, Text files, SQL Server, and Oracle databases.
- Excel Query Generator (SQL Automation): Designed an Excel-based utility that automates SQL query creation for source, staging, and target tables.
- ETL Validation Framework (Python): Developed a reusable framework for data comparison, schema validation, and regression testing for ETL workflows.

EDUCATION

Master of Business Administration (MBA) | Marketing (Major), Human Resources (Minor) | Sri Venkateswara University, India | 2017 - 2019

Bachelor of Science (BSc) in Computers | Yogi Vemana University, India | 2016

AWARDS

- RNR Appreciation Award - HCL Technologies, 2023
- Best Employee Award - Apexon, 2022
